Summary

I use HTML, CSS, Sass, Javascript or a framework like React or Bootstrap to develop dynamic front-end applications. On the back-end I use Node.js and Express or Python and flask to routing, connecting to databases and APIs, authentication, anything necessary to make the application work. With that in mind, I believe the most useful tool I have is the ability to learn new technologies.

Skills

Python
Javascript
Node.js
Bootstrap
Express.js
Flask
SQL
React
